TECHNICAL INFORMATION AND PRODUCT INFORMATION

Mounted points from LUKAS

EFFICIENT AND PROFESSIONAL GRINDING

LUKAS mounted points are premium grinding tools with a long tool life that deliver high removal performance. They are perfect for efficient and effective rough processing, fettling, preparing and reworking weld seams, and for deburring.

From cutting to fine machining, we offer a range of mounted points in various shapes, sizes and finishes so that you always have the right grinding tool for the job. LUKAS mounted points are designed for grinding all kinds of material (steel, cast steel, tool steel, cast iron, aluminium alloys, titanium and nickel alloys, plastic, glass, ceramic and many more).

QUALITY

Grinding covers a broad spectrum of processes, from rough cutting to fine machining. This requires mounted points that deliver the right balance of machining performance and tool life, while achieving the desired surface quality. Manufacturing quality mounted points involves knowing the conditions in which the tools will be used, selecting the raw materials and understanding how to combine them in the right specification.

EKR

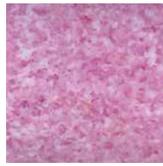

ABRASIVE

LUKAS offers you the abrasive you need for every application – tailored to your requirements and the materials you are working with. The following overview contains all raw materials for LUKAS mounted points. The abbreviations for the respective abrasives can be found in the quality designation of the LUKAS tools (see right).

DESIGNATION OF MOUNTED POINTS

All the important information in the product designation

LUKAS bonded grinding and polishing tools have all the important values and identifiers in the product designation, making it easy for you to find the right one for your requirements.

The overview below shows the individual elements and their content.

46

GRIT SIZES AS PER ISO 525

From coarse to very fine, the numerical grit size value is clearly displayed in the quality designation.

coarse	medium	fine	very fine
4	30	70	230
5	36	80	240
6	46	90	280
7	54	100	320
8	60	120	360
10	–	150	400
12	–	180	500
14	–	220	800
16	–	–	1.200
20	–	–	2.000
24	–	–	–

N

HARDNESS AS PER ISO 525

The hardness indicates the strength holding the abrasive grain bonded to the grinding wheel. It is determined using special measuring tools. Letters are used to indicate the hardness grade. The hardness increases with alphabetical order.

extreme soft	very soft	soft	medium	hard	very hard	extreme hard
A	E	H	L	P	T	X
B	F	I	M	Q	U	Y
C	G	Jot	N	R	V	Z
D	–	K	O	S	W	–

V4

BOND

The bond holds the abrasive grain to the grinding wheel. The most important bond types as per ISO 525 are:

Vitrified bond:

- **V** = vitrified bond

The code following the bond identifier is a factory-internal designation.

Organic bond:

- **BA** = resin bond
- **R** = rubber bond or bond using other elastomers
- **RF** = rubber bond, reinforced

LU

IMPREGNATION (OPTIONAL)

Impregnation can improve the grinding properties of all vitrified bonds, especially for processing certain steels:

- **Lu** = with resin
- **W** = with wax

TECHNICAL INFORMATION

Qualities and areas of application

We have created a range of different shapes and dimensions in proven qualities from the full spectrum of possibilities described here. These mounted points are available from stock.

Quality recommendations apply for ideal operating conditions.

SAFETY ADVICE

Safe grinding

PERIPHERAL SPEEDS

Our mounted points are manufactured to state-of-the-art standards, and carefully checked and tested. Their safety corresponds to EN 12413.

We produce mounted points with vitrified and resin bonds for an increased maximum peripheral speed of 50 m/s.

The maximum peripheral speed is limited by the following criteria:

1. Mass (weight) of the mounted point
2. Shape of the mounted point
3. Shank diameter
4. Shank overhang
5. Shank material
6. The concentricity of the mounted point

SAFETY

Safety is an essential mark of quality for any grinding tool. When using and storing mounted points, always observe the safety and accident prevention regulations, along with the FEPA safety recommendations.

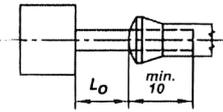

Our products are delivered with a safety ticket, as shown below, which indicates the maximum permitted speed for a certain overhang length (open shank length).

We do not use raw materials in our grinding wheels that are hazardous to health.

MATERIAL PROPERTIES

In the mould and die industry it is all about precision. Tool steels are produced to be hard and strong enough for their purpose. As a result, special grinding tools are required to process workpieces to the limits of their tolerances.

INDUSTRIES

- Tool construction
- Pattern construction
- Mould-making
- Aerospace engineering

PROCESSING EXAMPLES

- Re-grinding transitions
- Groove grinding
- Fine deburring
- Fine grinding
- Lap grinding
- Coordinate grinding
- Ball bearing grinding
- Turbine blades

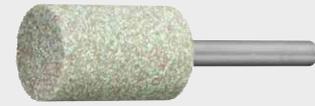

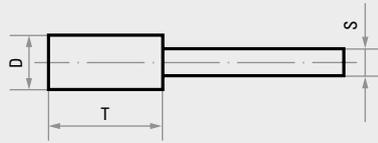

LUKAS GRINDING TOOLS

LUKAS mounted points for mould and die industry are extremely dimensionally stable and can cut even the hardest materials. Ceramic grain is extremely friable due to its microcrystal structure, making it self-sharpening. Materials that are difficult to cut (e.g. nickel-based alloys) can therefore be machined without any problems. Moreover, the use of special grain qualities ensures a long tool life. Our comprehensive product range lets you reach and process even the most inaccessible areas.

Ceramic mounted point

- maximum sharpness and hardness with ceramic self-sharpening effect
- impressive tool life
- high and fast removal rate, especially on hardened surfaces, scale, hard coatings and reinforced weld seams

QUALITIES AND PROPERTIES

Mounted points for machining non-ferrous metals

SIC-ALU

Green silicon carbide

★★★

MATERIAL PROPERTIES

Aluminium and its respective alloys have many varied and positive characteristics, making it the second most widely used metal after steel.

Aluminium has only 1/3 the density of steel. The purer the metal, the weaker it becomes, but this allows for better shape forming. Using unsuitable mounted points, however, can lead to smearing and clogging.

INDUSTRIES

- Transportation (railways, ships, automotive, aerospace)
- Metal construction (bridges, cranes, silos)
- Apparatus engineering
- Aluminium die-cast
- Chemical industry (vessels, pumps, pipes)
- Engines, transmission parts
- and many more

PROCESSING EXAMPLES

- Deburring
- Fettling
- Finishing
- Surface finishing

LUKAS GRINDING TOOLS

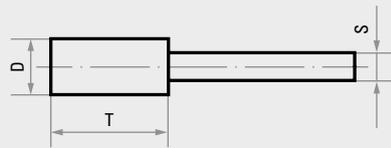

Our SIC-ALU mounted points were developed specifically for this application. A special structure ensures maximum tool life whilst preventing material from clogging the pores. The self-sharpening effect is aided by the use of a special impregnation.

THE SPECIALIST FOR ALUMINIUM

PROCESS EVEN THE SOFTEST MATERIALS WITHOUT SMEARING OR CLOGGING

GRINDING AND POLISHING (with bonded tools)

QUALITIES AND PROPERTIES

Mounted points for machining steel and cast steel

EKR
Pink aluminium oxide

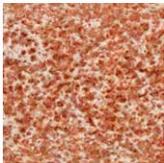

★★☆

MATERIAL PROPERTIES

The wide range of different steel types and workpieces made from them require mounted points with properties that cover this broad spectrum as much as possible.

PROCESSING EXAMPLES

- General rough grinding
- Fettling
- Rough grinding of weld seams
- Finish grinding of weld seams
- Deburring

EKWbr
White aluminium oxide, type brown

★★☆

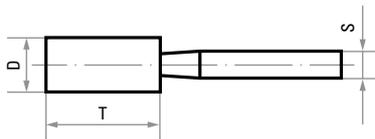

INDUSTRIES

- Mechanical engineering
- Automotive engineering
- Toolbuilding
- Vessel and equipment manufacturing
- Shipyards
- and many more

LUKAS GRINDING TOOLS

The wide selection of LUKAS grinding tools includes countless shapes, sizes and qualities. You will find the correct tool from our standard range to solve most grinding problems, irrespective of the material, type of power tool or any other influencing factors. These mounted points are designed for high stock removal and long tool life.

EKR mounted point

★★☆

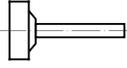

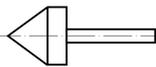

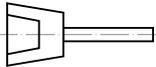

- perfect results on structural steel and for rough grinding with aluminium oxide
- extremely hard and sharp for a long tool life
- also cuts harder materials efficiently

QUALITIES AND PROPERTIES

Mounted points for machining non-rusting steels

RKD

Mixture of dark red and pink aluminium oxide

★★☆

MATERIAL PROPERTIES

Non-rusting steels are difficult to machine. They tend to smear due to the nickel content, while their poor heat conductivity often causes the material to overheat within the grinding contact zone.

PROCESSING EXAMPLES

- Rough and finish grinding
- Deburring
- Fettling
- Finishing weld seams
- Surface finishing

NK-BA SOFT

Regular aluminium oxide with resin bond, iron- and sulphur-free

★★☆

INDUSTRIES

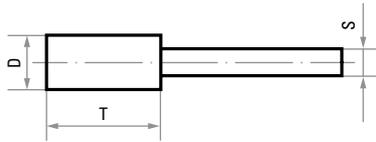

- Steel construction and fabrication (façades, handrails, sanitary equipment)
- Vessel manufacturing
- Casings and panelling
- Medical technology
- Shipyards
- Food industry
- and many more

LUKAS GRINDING TOOLS

LUKAS has developed particularly high-performance tools for non-rusting steels that deliver exceptional stock removal, even under adverse conditions.

These tools do not contain any iron, sulphur or halogens. This generally prevents chemical reactions (corrosion) of the workpiece material in the grinding contact zone.

RKD mounted point

- for non-rusting steels
- excellent removal rates, also under difficult conditions

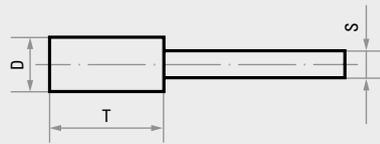

★★☆

MATERIAL PROPERTIES

The characteristics of the various types of cast materials are normally determined by their carbon content and the way in which the carbon is removed from the material structure. Cast materials are generally rough machined. The skin contains inclusions of sand from the casting process; large burrs, sprues and risers, holes and cracks must all be removed by grinding. These areas to be ground are often difficult to reach.

INDUSTRIES

Manufacturers of cast components such as engine blocks, gear box casings, cylinder heads, frames, stands, machine slides, gears, crankshafts, pump and turbine housings, machine tool components and many more.

PROCESSING EXAMPLES

- Deburring
- Fettling
- Polishing
- Finish grinding of repair welds
- Removing holes and cracks

LUKAS GRINDING TOOLS

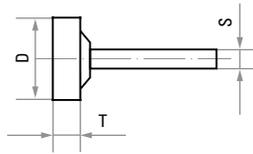

LUKAS mounted points for grinding cast materials contain special grain mixtures and tough bonding systems, delivering excellent performance in the applications mentioned above.

The aggressiveness of the abrasive grain and the smooth running of the mounted points allow for ergonomic machining with minimum force. Mounted points with specially extended shanks are also available on request.

NK hard mounted point

- perfect for grinding cast materials
- special grain mixture ideally suited to the material
- for ergonomical working with minimum force

QUALITIES AND PROPERTIES

Mounted points for grinding plastic and rubber

HOK
Spherical
aluminium oxide

★★☆

MATERIAL PROPERTIES

Materials such as rubber or plastic are very elastic and have a very low melting point. They flex and generate heat, often resulting in a bad odour and smearing.

INDUSTRIES

- Rubber processing
- Plastic processing

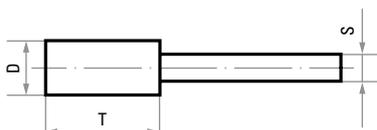

PROCESSING EXAMPLES

- Repairing and re-vulcanising tyres
- Repairing conveyor belts
- Preparation of various areas for adhesion
- Deburring rubber or plastic components

LUKAS GRINDING TOOLS

LUKAS grinding tools for machining rubber and plastic contain special spherical grains (HOK) in a very open ceramic structure. This abrasive creates permanent small razor-sharp cutting edges which pluck out the material from the surface. Consequently, these mounted points are ideally suited for the machining applications listed above.

HOK mounted point

Recommended for: ● Cast material ● Inox/Steel

SAFETY ADVICE

This tool must be used with a flange as per DIN 69864.

Sharpening stones

★★☆

RU 1–4 particularly suitable for:

- profiling
- sharpening
- dressing

of bonded grinding and polishing tools

Product number	Description	Quality	L mm	B mm	C mm	Pack contains

GET YOUR GRINDING AND POLISHING POINTS READY FOR WORK AGAIN QUICKLY

WE ARE FLEXIBLE AND CAN OFFER ALMOST ANY VARIANT

SHARPENING STONES WITH SILICON CARBIDE

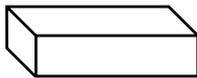

These sharpening stones feature an extremely sharp and rough abrasive grain, delivering perfect results in combination with a hard vitrified bond. This means you can get your grinding and polishing points back in working order in no time. The sharpening stone is ideal for profiling, sharpening, opening pores and removing material from bonded grinding and polishing tools. This silicon carbide tool grinds cool and generates few sparks, making it suitable for use in aerospace engineering. Even hard materials like stone, glass and high-alloy materials can be processed efficiently. The hard and sharp abrasive grain ensures a long service life. Regular tests guarantee high safety and proven quality.

SHARPENING STONES WITH ALUMINIUM OXIDE

Made from white aluminium oxide, this sharpening stone is perfect for finely grinding workpieces by hand in the mould and die industry. The high hardness and sharp grain of the aluminium oxide ensure its long service life. It can also easily process hard materials. Regular tests guarantee high safety and proven quality.

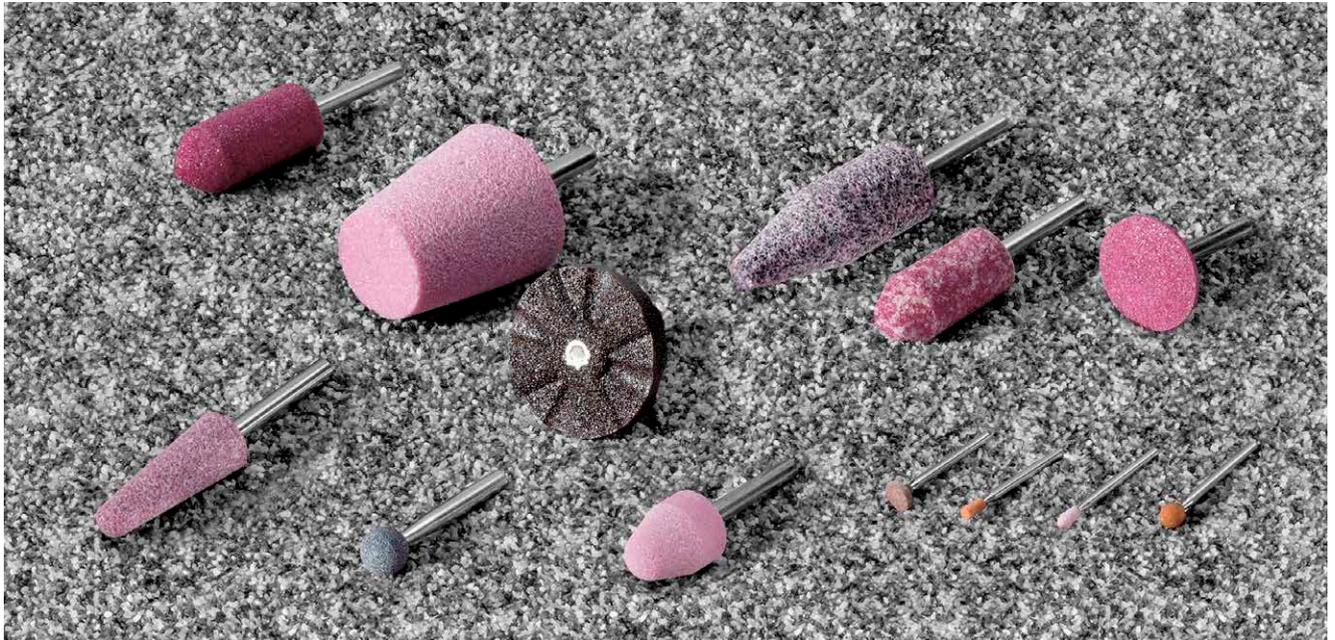

POSSIBLE SHARPENING STONE DIMENSIONS

Here you can find various sharpening stone variants. Simply let us know which dimensions you need.

Shape	Length mm	Width mm	Height mm
	25	15	5–30
	44	35	18–30
	48	19	5–30
	50	25	10–35
	90	70	20–35
	100	30	10–35
	100	50	10–35
	120	10	5–35
	150	25	10–35
	150	50	10–35
 half-round	216	78	20–35
	150	13	5–35

CUSTOMIZED PRODUCTION

Grinding wheels specially developed for your application

TAILOR-MADE GRINDING WHEELS

We can also provide you with customised grinding wheels:

- Wheels in special qualities
- Wheels in special dimensions
- Wheels in special profiles
- Mounted points in imperial dimensions and/or with imperial shanks
- Mounted points with internal thread and matching mounting arbors
- Cup wheels
- Grinding wheels – plain and tapered
- Mounted points with extended shanks
- Mounted points with internal thread and matching shank extension
- Sharpening and dressing stones
- and many more

YOUR CUSTOM PRODUCTION REQUEST

Please provide us with all the relevant information about your processing problem when sending your request. This will help us react quicker. This information should include:

- Shape, dimensions, shank, bore size of the grinding wheel (a sketch or technical drawing would be of great assistance)
- Material to be ground
- Type of application (e.g. fettling, deburring...)
- Surface finish requirements
- Power tool speed (rpm)
- Anticipated order quantity
- Tool currently being used (type, quality...)
